# TWEAKBENCH free vst instruments and effects

yoink

overview

yoink is a vst effect best used for live performace. it has an inline sampler that you can grab samples from the current live effect channel. you can then trim the loop, reverse, and process with effects in realtime. the left joystick controls bitrate and pitch, while the right joystick controls delay time and delay feedback. the demo mp3 was a simple beat, processed in realtime. version 1.01 brings the new user interface, as well as some small bug fixes and optimizations.

midi cc mapping

PARAMETER	CC#
bitrate	19
delay time	17
end point	24
feedback	16
loop	23
loop point	25
mix	18
monitor	27
pitch	20
record	21
reverse	22
start point	26
